

User Guide

Controller for evaporator control AK-CC 750

ADAP-KOOL[®] Refrigeration control systems

Menu list

This menu function can be used together with system software type AKM. The description is divided up into function groups that can be displayed on the PC screen. Within each group it is now possible to show the measured values, or settings. Regarding the use of AKM, reference is made to the AKM Manual.

Validity

This menu operation (from May 2015) applies to controller type AK-CC 750, code Nos 080Z0125 with programme version 6.5x.

Function groups

005:054	
Alarmo	AKC text
Select application	Default
Section A - Thermostat Section B - Thermostat Section C - Thermostat Section D - Thermostat	Logs
Section A - Injection Section B - Injection Section D - Injection Defrost	Alarms
Common functions Master control functions	OK
	Close

The operation is divided up into several function groups. When a selection has been made, push "OK", and you may continue to the next display. By way of example, "Common thermostat" has been selected here.

From the measure line the different values can be read. The values are constantly updated.

In the list of settings the set values can be seen. If a setting has to be changed, select the parameter and proceed via "OK".

Common thermostat			
	005:	054	
Measurements		Settings	
AK error Reg. condition A Ther. Air A 'C Reg. condition B Ther. Air B 'C Reg. condition C Ther. Air C 'C Reg. condition D Night status Thermostat band	ON 0 ******* 0 ******* 0 0 0 0 7 1	Main switch Thernostat type Ther. temp Ther. band control Ther band select Day/Night control Melt function Melt interval hour Melt time min	OFF 3 0FF 1 0N 1 5
AKC text Default	Trend	Change	Close

Measurements

The various measurements can be read directly. If a graphic display of the measurements is required, up to eight of them can be shown. Select the required measurements and push "Trend".

Settings

Settings can only be made for the daily operation. Configuration settings cannot be seen, changed or written out. They can only be made from the Service Tool programme.

There are four kinds of settings, ON/OFF settings, settings with a variable value, time settings and "reset alarms".

Main switch	
Actual value	ОК
New value	Cancel
C ON	
• OFF	

Set the required value and push "OK"

Thermostat type	
4 New value	OK
3	Cancel
Actual value	
1	

Enter the new value or move the sliding scale up or down. The new value will apply, when "OK" is pushed.

Go through the individual functions one by one and make the required settings. When settings have been made for one controller, the set values may be used as basis in the other controllers of the same type and with the same software version. Copy the settings by using the copy settings function in the AKM programme, and adjust subsequently any settings where there are deviations.

NB! If a list is required for noting down the individual settings, a printout can be made of it with a function in the AKM programme. Read the next section, "Documentation".

Documentation

Documentation of the settings of the individual controllers can be made with the print function in the AKM programme. Select the controller for which documentation of the settings is required and select the "Print Settings" function (cf. also the AKM Manual).

	AD status B	Status on adaptive defrost. Same setting as for Adaptive defrost status A

Danfoss

	AD status C AD status D	Status on adaptive defrost. Same setting as for Adaptive defrost status A Status on adaptive defrost. Same setting as for Adaptive defrost status A
	Defrost time A min Defrost time B min Defrost time C min Defrost time D min No. of defrost No. of saved defrost Suction valve Drain valve	Actual defrost cutin time or duration of the latest finished defrosting period in section A Actual defrost cutin time or duration of the latest finished defrosting period in section B Actual defrost cutin time or duration of the latest finished defrosting period in section C Actual defrost cutin time or duration of the latest finished defrosting period in section D Accumulated number of defrosts Accumulated number of defrosts skipped as a result of adaptive defrost function Status on suction line valve (hot gas) Status on drain valve (hot gas)
Settings	Main switch	Main switch: ON: Regulation
	Defrost control Defrost type	Select defrost. Yes/no Select defrost type 1: Electric defrost 2: Naturally defrost 3: Hot gas 4: Warm brine
	Manuel start defrost	Start of manual defrost. Activated by ON
	Manual stan defrest	Ston of manual defroct
	Manuel stop deirost	stop of manual derrost.
	Defrost schedule	Select defrost start schedule:
		1 = Local: The internal defrost start schedule is applied
		2 = Network: Defrost start via network system unit schedule
	Max defrost interval	Maximum time between two defrosts. In the case of the application of defrost sched- ule, set interval time to a higher value than the longest time between two defrost in the schedule.
	Fan run during def.	Setting of fan operation during defrost.
	Defrost stop method	Select whether defrost is to be stopped by time or temperature
	Denost stop method	1 – Defrest standed by time
		T = Denost stopped by time
		2 = Defrost stopped by temperature with time as security (individual outputs)
		3 = Defrost stopped by temperature with time as security (shared output)
	Defrost stop sensor	Select defrost stop sensor
Defrost s	Denost stop sensor	
		1: Stop on time
		2: Stop on S2
		3: Stop on S3
		4: Stop on S4
		5· Ston on S5-1
		S. Stop on SS-1
		6: Stop on S5-1 and S5-2 (when both sensors has reached the stop temperature)
	Defrost stop temp. A	Set defrost stop temperature for section A
	Defrost stop temp. B	Set defrost stop temperature for section B
	Defrost stop temp. C	Set defrost stop temperature for section C
	Defrost stop temp D	Set defrost stop temperature for section D
	Max Dofr time min	May Dermissible defrect time in minutes (security time on tempeature step)
	Max. Den. time min.	Max. Permissible denost time in minutes. (security time on tempeature stop)
	Pump down delay min	Time delay before start of defrost. The valve is closed and the evaporator is emptied
		of refrigerant.
	Drip delay min	Time delay after defrost where drops of water run off the evaporator.
	Drain delay	Drain delay where drain valve is open to ensure equalizing after defrost.
	,	Only apply for hot gas defrost.
	Fan delay min	Max time delay from injection start and until the fans start (freezing of water drops)
	Drip trav boater del	Sot how long the drin tray beating element is to remain active after defrect is standed
	Drip tray fleater del.	Set now long the drip tray heating element is to remain active after denost is stopped
		by time or temperature.
	Fan start temp. °C	Setting of S5 temperature for start of fans
	Max. hold time min	Max. time delay for start of refrigeration when the controller's defrost is coordinated
		with other controllers via the data communication
	AD mode	Setting of adaptive defrost
		0. No adaptive defrost function
		1: Monitor This function is applied solely to monitor the ice formation on the evene
		rator
		2: Skip during the day. This function is applied to skip unnecessary defrost during the
		day and when a night blinds is used for the specific appliance.
		3: Skip both day/night. This function skips unnecessary defrost and can be applied to
		cold storage rooms and frost rooms and refrigeration appliance where night blinds
		cannot be used
		4: Fully adaptive defrost This function starts a defrost if a medium ice formation is
		dotacted (door not clin defect). This setup can adverte requiring the application of the
		storage rooms and freezer rooms where the time of defrost is not important.
		storage rooms and freezer rooms where the time of defrost is not important.
